

Tracking Impact toward the Pandemic Response and Future Resilience

Overview

Synergy Indicata is a leading software used by governments and nonprofits to track the results of their programs. Amid this unprecedented crisis, governments and nonprofits can adopt Indicata to manage their portfolio of pandemic projects or grants and measure their impact on the fight against the coronavirus and its aftermath.

Conceived purposely to serve the monitoring and evaluation (M&E) needs of the public and nonprofit sectors, Indicata can be tailored to a specific organization and rapidly deployed to support emergency efforts.

Furthermore, Indicata can be implemented on a national level or for the needs of a particular government agency, NGO, or foundation.

Key Features

■ Program Portfolio Management

Governments and nonprofits can gain a single source of truth about their portfolio of pandemic programs and their mission-critical data. As a result, they can make programmatic decisions based on accurate, timely data. They can also leverage Indicata to streamline how they design, plan, and prioritize emergency and recovery programs.

■ Monitoring and Evaluation

Organizations can assess results by creating M&E frameworks, setting performance indicators, and measuring progress toward targets. Results can be outputs, short-term outcomes, and longer-term outcomes. They can be disaggregated to the right level of analysis and aggregated across projects to determine organization-wide impact.

■ Data Visualization and Analysis

Decisionmakers can use interactive, drill-down dashboards to analyze their portfolio and make data-informed decisions. Organizations can report the progress and impact of their work to stakeholders and the wider public.

■ Integration

Indicata can share data with other information systems, enabling executives and managers to have a unified view of their organization's performance based on different data from different sources.
